

## Avian pathology a colour handbook pdf

Skip to Main Content Skip Nav Destination Avian Diseases Guidelines for Authors General Information Mission Avian Diseases is an international journal dedicated to publishing original basic or clinical research of the highest quality from various disciplines including microbiology, immunology, pathology, pa and epidemiology. Papers on avian diseases relevant to etiology, pathogenesis, diagnosis, treatment, and control are accepted. Manuscripts dealing with avian species other than poultry will be considered only if the subject is relevant to poultry health. The mission is to enhance scientific knowledge and promote poultry health. Original Manuscripts Only Avian Diseases will consider only original manuscripts not publication elsewhere. Abstracts printed as a part of the program of a meeting will not be considered as a prior publication. However, if the text, tables, and figures appear to be the same as that published elsewhere, Avian Diseases will not consider the manuscript. Reviewers All manuscripts are reviewed by the Editor and two or more members of the Editorial Board or other scholars selected by the Editor. During the submission process, the submitting author should provide the names and contact information of three potential reviewers for the manuscript. The suggested reviewers should not be collaborators of any of the authors or from the same institution as any of the authors of the submitted manuscript. They do not have to be members of the Editorial Board. The Editor is not obligated to use any of the proposed reviewer. Every effort will be made to ensure impartial reviews and to avoid conflicts of interest. Copyright Avian Diseases is copyrighted by the American Association of Avian Pathologists (AAAP) and authors must sign a copyright transfer form before articles are published. The corresponding author must complete a copyright agreement form and page charge agreement form as part of the submission process. He or she will need to login using his/her username and password for this purpose. U.S. Government employees are exempt from this requirement if the work is considered part of their official duties. The AAAP grants the following rights to the articles published in Avian Diseases: reproduce the article by photocopying, reprint portions or the entire article in print or other media, display the article in public, incorporate the article in course packs, place the article in a digital repository or archive owned by the employee's institution, or compile the article into a larger scholarly work. Reprinting and reproduction of the article or parts of the article in any form and in any language must clearly display a complete reference to its original publication in Avian Diseases. For National Institutes of Health (NIH)-sponsored publications, Avian Diseases grants the corresponding author permission to provide a copy of the accepted manuscript to the NIH upon acceptance for publication, with public release in PubMed Central, twelve months after final print publication by the journal. Cost Effective January 1, 2019 page charges are waived for all AAAP Members. A page charge of \$50 per page will be charged for non-AAAP members. Authors are encouraged to become AAAP members. There is no longer a charge for color images. Authors are encouraged to submit images in color for print and online. If an author (AAAP member or non-member) makes changes to a manuscript after it has been typeset, the author will be billed at a rate of \$5.00 per change. Parties designated in the page charge agreement for payment will receive a bill via email from the AAAP just before or after publication of the manuscript. Payment is due within 30 days of receipt. Please contact the Avian Diseases office if an invoice is needed before publication of the article. Manuscript Instructions The manuscript submission website for Avian Diseases is . Cover Letter Submit a cover letter separate from the manuscript. It should be addressed to the Editor, requesting publication of the article in Avian Diseases. Include any pertinent information that will be helpful in evaluating the suitability of the article. Manuscript Format All text must be double-spaced using 12-point type in Times New Roman font on 8½ by 11-inch pages. Manuscript files should be in Word (.doc or .docx) formats. PDF format is not acceptable for the source file of the text of the manuscript. The PeerTrack system will automatically merge the text file that the author uploads with the figure and table files to make one article file PDF. This allows editors and reviewers to view and/or download the manuscripts should include continuous line numbering on the left margin of each page. Title Page The first page of the article file should be the title page. The title should be brief, accurate, and clear. Preferably, it should not contain verbs. All authors should be listed; omit academic degrees, but give affiliation and address, including zip code or postal code. Indicate the corresponding author and include a complete mailing address and email address. A short title is also required. Although not printed, this is used when generating reports. Summary follows immediately after the title page. Keep it close to 3% of the paper, conveying the gist when read independently. Give meaningful facts instead of generalities. All summaries are translated into an international version of Spanish by Avian Diseases. Author-supplied translations help in the formulation of the international version. Key Words/Index Terms Provide not more than six to eight key words or index terms after the summary. Abbreviations Define the abbreviations used in the manuscript in alphabetic order, after the key words. Introduction State the problem and reason for presenting findings. Materials and Methods Describe general materials and methods once. The experimental design should be described clearly and in enough detail for another researcher to duplicate the experiment. Be clear and explicit about relevant details. Materials/equipment listed by name and address. This requirement applies also to biologics used unless a justifiable reason is presented to the Editor. Results Present results in logical rather than chronologic order, usually with subheads. Discussion is needed, do not discuss. Cover implications of your findings or relate them to major problems in the field. Do not use data not given in the results. References Authors are responsible for the accuracy of the reference list. Do not list a source unless it has been published or accepted for publication and the name of the journal can be given. Cite only scientific URLs. Follow the citation-sequence format in Scientific Style and Format, 8th ed., from the Council of Science Editors. Number sources in consecutive order as they are first mentioned in the text. Number citations or tables according to the placement of the figure or table in text. List up to and including 10 authors, then use et al. Double space throughout. Do not underline anything. Italicize Genus species if it is done so in the source article. Cite sources in text by numbers in parentheses; e.g., (3,4,5). Cite unpublished work or personal communications in parentheses within the body of the text and do not include them in the reference list. At initial submission, upload a letter (as a second cover letter) stating the facts from the person cited in the personal communication. Following are examples of the most common reference types (reference numbering has been omitted). Journal article Pyles R B, Jezek GE, Eaves-Pyles TD. Toll-like receptor 3 agonist protection against experimental Francisella tularensis respiratory tract infection. Infect Immun. 78:1700–1710; 2010. Article in press Hofmeister EK, Balakrishnan CN, Atkinson CT. Population differences insusceptibility to Plasmodium relictum in zebra finches Taeniopygia guttata. Avian Dis. Forthcoming 2018 Dec. Book Dufour-Zavala L. A laboratory manual for the isolation, identification, and characterization of avian pathogens. 5th ed. Athens (GA): American Association of Avian Pathologists; 2008. Chapter in a book Smyth, V. Avian astroviruses. In: Liu D, editor. Molecular detection of animal viral pathogens. Boca Raton (FL): CRC Press. p. 101–109; 2016. Thesis or dissertation Maxted, AM. Avian infectious bronchitis in Serbia, 2005–2009. Paris (France): OIE [updated 2013 Dec 30; accessed 2017 Jan 13]. 2013. Acknowledgments Acknowledgments, which follow the references, should be brief. Humane Care of Animals The AAAP is supportive of the humane care and treatment of all animals. If experimental animals are subjected to painful or harmful conditions, the author(s) must indicate in the text that the procedures were approved by the Institutional Animal Care and Use Committee. Questionable manuscripts will not be processed for publication. Other Publishable Materials These publications include reviews, research notes, case reports, editorials, letters to the editor, history articles, and AAAP White Papers. Reviews These are concise treatments dealing with subjects of interest to the readership of Avian Diseases. Reviews should be documented with reference materials. The format and length will depend on the subject matter. Research Notes These are reports dealing with a limited subject but must follow the format of a regular manuscript to enable other researchers to reproduce the reported results. Case Reports These are reports dealing with a limited subject but must follow the format of a regular manuscript to enable other researchers to reproduce the reported results. Case includes more than one bird unless information is exceptional. Clear and concise but contains complete description of case history. Case supported by appropriate and fully described laboratory tests. Epidemiologic and statistical data presented. High quality images of clinical signs, gross lesions, histopathology, and other pertinent images. Response to treatments or prevention/control measures. Any follow up information. Editorials These are discussions of current issues, providing specific views on a subject of interest. Letters to the Editor Letters regarding material published in Avian Diseases or topics of interest to Avian Diseases readership are accepted for publication. The Editor might ask others to provide responses to the letters. History Articles These are written versions of the History Lectures presented at the AAAP annual meetings. They are authored by the lecture presenters. White Papers These are position statements of the AAAP on current important issues. Authored by members of the AAAP, approved by the AAAP Board, and reviewed by the editors for scientific content Chemical Nomenclature Because formulations change, trade or code names must be followed by chemical names of active ingredients. Tables are typed double-spaced throughout; they must not contain any vertical rules. Tables should be well planned and concise, and tell a story; lack of planning may obscure the significance of your findings. Where possible, combine data. Tables may be placed at the end of the article file or in separate files. Table headings should be complete enough for data to be understandable without referring to the text. Tables must be submitted in .doc, .docx, .xls, or .xlsx formats. If tables are submitted as separate files, add table captions on the last page of the article file. Figures Illustrations of high guality should be clearly indicated in the name of the file. When submitting illustrations to Avian Diseases, keep in mind that the journal uses a two-column format. Figures will be reduced in size to fit into one or two columns. The width of one column is approximately 3.5 inches (8.9 cm). The width of two columns is approximately 7.25 inches (18.4 cm). The maximum height of a figure is 9.5 inches (24.1 cm). Lettering should be scaled so that it will be legible if the illustration is reduced in size to fit the page. Figure captions should be listed together on a separate page in the text file after the references and/or tables. Graphic files must be uploaded as PDF, TIFF, JPEG, or EPS files. Digital color files must be in CMYK mode. A minimum resolution of 300 dpi is required for all halftones and color images in print. Line art, such as graphs, require 1200 dpi in order to produce high-quality images in print. The authors will be asked to redo all artwork that is considered unacceptable for printing. This may delay publication. If the author selects a color option then images should be submitted in color; several color images may be mounted in one color plate. If the author does not choose a color option, submit images in black and white. Graphs and charts should have clearly labeled axes that include the calibration. Symbols and abbreviations should be explained in the caption. Photomicrographs should include a size bar. For more details on general style, consult back issues of Avian Diseases and Scientific Style and Format, 8th ed. Supplemental Materials Authors are encouraged to provide supplemental material files to enhance the content of their articles submitted to Avian Diseases. These supplemental files will be available to online subscribers of the journal and a link referred to in the print copy of Avian Diseases. Multiple files can accompany an article, to include data sets; extensive tables; multimedia such as animation, sound, or video files; and other additional supporting material. Although the supplemental files must be relevant to the journal article, they are intended only to support the primary content presented in the article, which must be self-contained and stand on its own. Acceptance for publication will be based solely on the content of the article. Authors are expected to supply supplemental material files in their final format in terms of editing, proofreading, and style and organization of content. The AAAP and Allen Press are not responsible for the content of the supplemental files and cannot verify their quality, integrity, and usability. Supplement Preparation Guidelines Use accessible file formats and extensions or those for which plug-ins are available for free. With the exception of some executable files such as those with .exe or .vbs filename extensions, most standard formats are permitted. Consult with the Avian Diseases office avian.diseases@aaap.info if you have questions about the suitability of a file. Submit the files in download-ready format when offline use is intended. Each supplemental file should be self-contained without internal links to other files or sites. Files should be accessible across platforms (e.g., PC and Mac). Be conscious of download speeds and keep file sizes to a minimum where it is practical to do so. If multiple supplemental material files accompany an article, consider including an ASCII README file to describe the number and type of files and their contents, and to include any special instructions or author contact information. All text must be in English. File Submission Guidelines Supplemental material files should be submitted concurrently with the article text and figures. Although acceptance for publication will be determined solely by the content of the article, reviewers will have the opportunity to review all related materials, if they wish. The total size of all files uploaded for an article (to include manuscript, art, and supplemental files) cannot exceed 400 MB. Copyright clearance and release statements signed by the authors pertain to all supplemental materials as well as to the article. Where permission has been received to reuse material or where credit should be given as a matter of courtesy, appropriate acknowledgment must be so stated within the relevant materials, to include the original source, copyright owner, and year. Supplemental material files may be referenced in the article. Number related elements consecutively: Supplemental Fig. S1, S2; Supplemental Video S1, S2; Supplemental Table S1, S2; Supplemental Table S1, S2; Supplemental Table S1, S2; Supplemental Video the supplemental material file: "... and additional data are shown in Supplemental Data S1"; or "... go to the Supplemental Materials link that accompanies the electronic version of this article at www.aaapjournals.info ." Ensure that updated versions of your supplemental material files are submitted and maintain copies of the final files. The AAAP will not revise or update files after publication. No additional fees are charged for including supplemental materials with an article. avian pathology a colour handbook pdf
